

July 7, 2009

Hello,

My name is Larry Hill. I am a software developer and I have been building programs and applications professionally since 1990. Over the course of the last 19 years, I have done work in the fields of healthcare, steel production, web safety, lab analysis, semiconductor fabrication, and direct sales systems programming. At Clinical Research Networks, I was the principle architect and developer of their flagship web product, SiteComm, which featured technology that was not rivaled until the coming of ASP.NET.

I first met James Haring while working at Cimatrix, Inc. in Salt Lake City. Cimatrix primarily provides control software for semiconductor fabrication, and James came to Cimatrix as their specialist in hardware control systems and as a C++/C# programmer. I found James to be very friendly and easy to work with.

James was always reliable to be at work and on the job. He was diligent at improving his skills. He both shared his insights with his coworkers and learned from them in return. James often brought ideas and suggestions to me to help with my development projects. And though I did not get enough opportunities to work on projects with him, I found him to be a very capable programmer.

I recommend James Haring as a software developer for his reliability, his integrity, and his capability to work in development teams as well as perform solo programming. You will find it a pleasure to be working with him.

Best regards,

Larry Hill
